

THIRD SPACE
LEARNING

HELLO!

Today we are going to revise
geometry – 2D shapes

Arithmetic Warm Up

1. How many sides does a quadrilateral have?

2. Name the type of triangle below:

Revision on properties of shapes

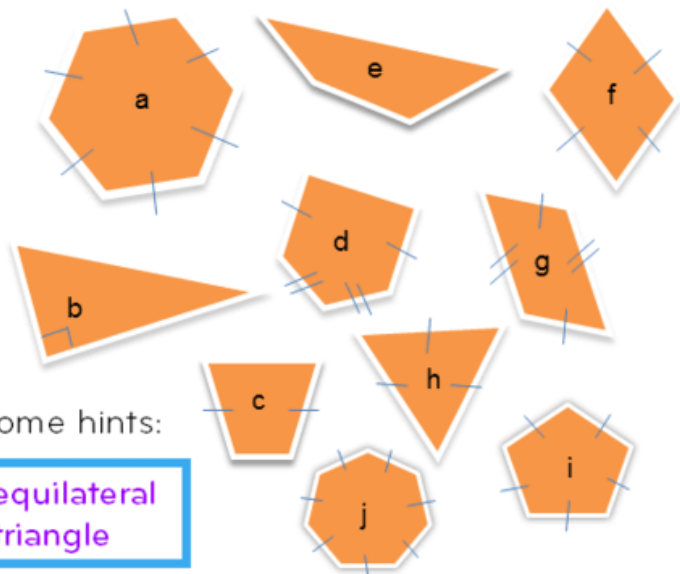

First we are going to revise:

names and properties of 2D shapes

Revision: 2D shapes

1. Name these **polygons** and if they are **regular** or **irregular**.

Some hints:

equilateral
triangle

parallelogram

pentagon

trapezium

rhombus

scalene triangle

2. Which labels below are **incorrect**?

3. Explain the difference between an **obtuse** and **acute** angle?

Revision: Types of triangle

1. Equilateral triangle:

- All the sides are the same length.
- All the angles are equal.
- Each angle is 60 degrees.

2. Isosceles triangle:

- Two equal angles.
- Two equal sides.

3. Scalene right-angled triangle:

- One right angle.
- Two other unequal angles.
- No equal sides.

4. Right angled triangle:

- One 90° angle. Little square shows it is a right angle.

Question: All my sides are the same length. What triangle am I?

Complete

Question 1

This diagram shows a square with dots at the vertices and at the middle of each side.

The square is divided into four triangles, **A**, **B**, **C** and **D**.

Write the letters of all the triangles that have **two equal sides**.

1. What do you notice?
2. What do you know?
3. Can you show your working out?
4. How could you extend the question?

Question 2

Complete

Four large circles and five small circles fit exactly inside this rectangle.

Not
actual size

The **diameter** of a large circle is **17.5** centimetres.

Calculate the **diameter** of a small circle.

1. What do you notice?
2. What do you know?
3. Can you show your working out?
4. How could you extend the question?

Let's review:

Know the names and properties of 2D

Draw a circle around the smiley face to show how you feel about what we've just been doing.

THIRD SPACE
LEARNING

Complete

CHALLENGE

A square always has four sides.

Is it true that a four-sided shape is **always** a square?

Circle **Yes** or **No**.

Yes / No

Explain how you know.

1. What do you notice?
2. What do you know?
3. Can you show your working out?
4. How could you extend the question?

Square

A square has

straight sides.

A square has

corners.

corner

sides = same length

Types of triangle

Right angled triangle:

- One 90° angle. Little square shows it is a right angle.

Scalene right-angled triangle:

- One right angle.
- Two other unequal angles.
- No equal sides.

Isosceles right-angled triangle:

- One right angle.
- Two other equal angles.
- Two equal sides.

What is a quadrilateral?

All these shapes are quadrilaterals. What do they have in common?

Circle parts

Draw the radius and diameter on the green circle.

What do you notice about the diameter and radius on these circles?
